4. STRATEGIC SAFEGUARDS & CAPITAL PROTECTIONS

1. Zero Try-On CAC Leak

By removing Virtual Try-On from the Free tier (0 try-ons), free trial acquisition cost (CAC) dropped from 3.07 EGP to **1.25 EGP**, completely blocking bot accounts and non-paying users from burning GPU compute.

2. Clean Currency Bounds

At **1 USD = 50.00 EGP**, subscription prices align cleanly (\$1.00 Basic, \$3.00 Mid, \$5.00 Pro, \$10.00 Enterprise), making budgeting and margin calculations perfectly predictable.

3. Serper 10x Arbitrage

Using Serper.dev (\$0.001/query) instead of SerpApi (\$0.010) or Google Grounding (\$0.0153) keeps external shopping search costs to **under 2.25 EGP / month** on Basic, yielding a **+50.3% net profit margin**.

4. Enterprise Resilient

Even at 4,500 monthly messages and 10 try-ons, the Enterprise plan remains **positive (+17.20 EGP)** in the absolute worst-case scenario.
