1. Wardrobe Classification Invariant

Classifying uploaded garments runs asynchronously in BullMQ. Because it runs **strictly once per garment** and caches normalized attributes in MongoDB, classifying 50 items costs only **1.72 EGP**, leaving chat reasoning free forever.

2. Safe Unit Economics on Basic

By capping the Basic tier (50 EGP) at 5 messages/day, 15 searches, and 4 try-ons, the plan achieves a guaranteed **+31.5% profit margin (+15.73 EGP)** even when paying full out-of-trial rates from query #1.

3. Free Trial Guard & Search Buffer

Capping Free tier at **10 lifetime messages per account** cuts CAC to **1.22 EGP (\$0.025 USD)** and eliminates bot abuse. Additionally, Google AI Studio's **5,000 free monthly search queries** further elevate Basic gross margins up to **+45% to +55%**.
