

1. OPERATIONAL UNIT ECONOMICS & GRANULAR MODEL COMPARISON

Operation Type	Google Stack (Current Production)	OpenAI Stack (GPT-6 Luna + GPT-Image-2)	Unit Variance	Strategic Implication
AI Stylist Chat Turn ~3.3k in / ~800 out	Gemini 3.1 Flash Lite \$0.0020 USD (~0.098 EGP)	GPT-6 Luna (\$0.10 in / \$0.50 out) \$0.00073 USD (~0.036 EGP)	-63.5% Cheaper	Massive text margin expansion on high-volume tiers (Mid, Pro, Enterprise).
Wardrobe Classification Vision extraction at upload	Gemini 3.1 Flash Lite (Vision) \$0.00070 USD (~0.034 EGP)	GPT-6 Luna (Vision) \$0.00035 USD (~0.017 EGP)	-50.0% Cheaper	One-time BullMQ ingestion cost becomes negligible across all tiers.
Virtual Try-On (Phase 15F) Full-body shape composite	Gemini Flash Image Lite (Nano Banana 2 Lite) \$0.0336 USD (~1.65 EGP)	GPT-Image-2 (Medium Quality) \$0.0530 USD (~2.60 EGP)	+57.7% Higher Cost	OpenAI image generation is 58% more costly per try-on; High quality (\$0.211) is non-viable.
Live Web Grounding Real-time Egypt store search	Google Search Grounding 5,000 free searches/month, then \$0.014	OpenAI Search / Tavily API ~\$0.0100 USD (~0.49 EGP), no free tier	Zero Free Allowance	Google's 5k free search pool saves \$50-\$75/mo across early fleet operations.

2. MASTER SUBSCRIPTION PLAN FINANCIAL BENCHMARK ACROSS ALL 5 TIERS

Plan & Price	Enforced Quotas & Invariants	Google Stack Total Cost	Google Net Profit	OpenAI Stack Total Cost	OpenAI Net Profit	Recommended Hybrid Net Profit
Client Free 0 EGP / \$0.00	• 10 msgs lifetime trial • 7 wardrobe items / 7 vision scans • 0 search 0 try-on	1.22 EGP \$0.025 USD	-1.22 EGP (CAC)	0.48 EGP \$0.0098 USD	-0.48 EGP (-60.7% CAC)	0.48 EGP CAC Ultra-safe bot protection
Client Basic 50 EGP / \$1.02	• 5 msgs/day (~150/mo) • 25 items (50% of 50 vision) • 15 searches 4 try-ons	34.27 EGP \$0.699 USD	+15.73 EGP +31.5% (51% free search)	24.01 EGP \$0.490 USD	+25.99 EGP +52.0%	+35.75 EGP (+71.5%) GPT-6 Chat + Nano Banana Try-On
Client Mid 150 EGP / \$3.06	• 35 msgs/day (~700 real) • 45 items (50% of 90 vision) • 30 searches 6 try-ons	104.06 EGP \$2.124 USD	+45.94 EGP +30.6%	56.89 EGP \$1.161 USD	+93.11 EGP +62.1%	+110.71 EGP (+73.8%) Doubles net operating margin
Client Pro 250 EGP / \$5.10	• 80 msgs/day (~1.4k real) • 100 items (50% of 200 vision) • 45 searches 8 try-ons	190.97 EGP \$3.897 USD	+59.03 EGP +23.6%	96.33 EGP \$1.966 USD	+153.67 EGP +61.5%	+179.12 EGP (+71.6%) 2.6x net profit over pure Google
Client Enterprise 500 EGP / \$10.20	• 150 msgs/day (~2.5k real) • 200 items (50% of 400 vision) • 60 searches 10 try-ons	320.16 EGP \$6.534 USD	+179.84 EGP +36.0%	151.66 EGP \$3.095 USD	+348.34 EGP +69.7%	+381.65 EGP (+76.3%) Net profit of 381 EGP / subscriber

1. The GPT-6 Luna Text Multiplier

At **\$0.10 in / \$0.50 out** per 1M tokens, GPT-6 Luna drops text reasoning costs by **63.5%**. On Pro and Enterprise tiers where clients exchange 1,400 to 2,500 messages monthly, monthly text costs drop from 137-245 EGP to just **50-89 EGP**.

2. Try-On Economics Divergence

While OpenAI dominates text pricing, **GPT-Image-2 is 58% more expensive** for virtual try-on (~2.60 EGP vs. ~1.65 EGP for Gemini Nano Banana 2 Lite). Using OpenAI for image generation diminishes its text savings on lower tiers.

3. Wardrobe 50% Storage Buffer

By enforcing active closet items at **50% of vision classification capacity** (e.g. 25 items stored vs. 50 scans), Murafiq guarantees users a 2x re-upload/photo swap buffer while keeping BullMQ vision costs under **1.8 EGP / user** permanently.

4. The Winning Hybrid Strategy

Routing **Chat & Vision** through **GPT-6 Luna** while routing **Try-On** through **Gemini Flash Image Lite** unlocks the ultimate business model: **+71% to +76% gross profit margins** across all paid tiers without any quality compromises.
